Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	09/902,281	MINOGUE ET AL.
	Examiner Mark W Bockelman	Art Unit 3762
<i>-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --</i>		
Period for Reply		
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.		
<small> - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). </small>		
Status		
1) <input type="checkbox"/> Responsive to communication(s) filed on _____.		
2a) <input type="checkbox"/> This action is FINAL. 2b) <input checked="" type="checkbox"/> This action is non-final.		
3) <input type="checkbox"/> Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.		
Disposition of Claims		
4) <input checked="" type="checkbox"/> Claim(s) <u>1-64</u> is/are pending in the application.		
4a) Of the above claim(s) _____ is/are withdrawn from consideration.		
5) <input type="checkbox"/> Claim(s) _____ is/are allowed.		
6) <input checked="" type="checkbox"/> Claim(s) <u>1-45 and 52-64</u> is/are rejected.

Art Unit: 3762

DETAILED ACTION

Priority

1. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Ireland as well as PCT on 01/11/1999 and 1/11/2000. It is noted, however, that applicant has not filed a certified copy of the Ireland and PCT applications as required by 35 U.S.C. 119(b). It is noted that several of the applied references in this office action would require the submission of the foreign priority documents (in english) to perfect priority and remove the applied documents as prior art.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1- 45 and 52-64 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hurtado USPN 6,341,237 in view of Axelgaard et al USPN 6,438,428.

Art Unit: 3762

Hurtado teaches several embodiments of an attachment means (20, 120 , 220) that serves as a belt member for holding electrodes to be placed upon the belt and user in positions for stimulating the same muscle groups and thus is concluded as covering the same “attachment means” as applicant. The examiner notes that applicant’s whereby clause at the end of claim 1 is considered an intended use since none of the elements (i.e. electrodes or pulse generator) are positively recited in the claim. Although the Hurtado disclosure teaches the placement of his electrodes in similar places as applicant to exercise the umbilicus and obliques muscles, Hurtado is not considered to teach applicant’s first and second locating means. Since applicant is entitled to those materials acts and structures disclosed in applicant’s specification by virtue of the use of means plus function language, the Hurtado reference cannot be said to anticipate the markings 29, and 30a,b,c which are stated to be applicant’s first and second locating means on page 20 lines 5-10 of the specification.

However, Axelgaard et al teaches a similar muscle stimulator with movable and removable electrodes that are positioned on an attachment member for fixing the electrodes at precise positions for stimulation. Since the electrodes are movable and removable to aid in such positioning/repositioning tasks, the attachment member is taught as being marked on the inside of the belt so as to provide reference marks as to the determined optimal positions to accommodate different size people. This allows new electrodes to be positioned as the older ones wear out or in instances when the attachment means is to be cleaned. The examiner considers these to be the same locating means as applicant describes in his specification. It would have been obvious at the

Art Unit: 3762

time of applicant's US filing date to have provided the Hurtado attachment means with similar first and second locating means since Hurtado is also concerned with having adjustable electrodes to accommodate people of different girth. Such markings would provide reference marks when the electrodes are repositioned or replaced as the result of cleaning and or electrode replacement. Furthermore, Axelgaard et al teach a similar electrode attachment system as that taught by applicant is that a two sided conductive adhesive member serving as an electrode may be attached to a pulse bus delivery system. (see figure 4 of Axelgaard et al).

With respect to claims 2-11 applicant merely recites the specific placement of the locating means which are upon the same muscle groups as Hurtado. Hurtado also shows electrodes to be placed above and below the umbilicus.

In regard to claims 12-18, applicant recites a referencing means in the claims. As noted in applicant's specification beginning at page 21 lines 30+, the referencing means is considered to be the locating area 31 as well as the main locating means and electrode. Thus, in this regard, the central electrode(s) in Hurtado, their underlying areas as well as the markings as modified by Axelgaard serve as the reference means.

Concerning claim 19, the Hurtado device is a device designed to exercise the abdomen and help the user to tone and reduce. In this respect, it would have been obvious to those of ordinary skill in the art that progressive reduction in abdominal girth would require repositioning of the electrodes to stimulate the desired muscle groups and therefore as modified by Axelgaard et al, would entail placing additional marks for placement of the electrode.

Art Unit: 3762

In addressing claim 20, Hurtado shows in figure 9 that the belt maybe fashioned from a stretchable electrode material (note double arrows) including between the central contact electrode(s) (142-143) and the side contact electrodes (146, 148, 150 and 152) as well as their respective “locating means” as modified by Axelgaard. Although the reference does not discuss the relative stretchability of the various portions of the belt, the examiner considers it obvious that the hook and loop connecting portions to be of less stretchability since such is conventional for hook and loop coupling patches.

While the Hurtado reference does not possess the same “contact means” as recited in claims 21-45 and as disclosed as reference numerals 45 and 46 of applicant’s figure 2, Axelgaard teaches repositionable electrodes that show applicant’s arrangement of two sided electrode adhesive patches that are adhered to a round contact of the inner side of the belt. See figure 4 of Axelgaard et al as well as column 2 lines 20-29. To have modified the positionable electrode arrangement of the Hurtado device utilizing the arrangement of the Axelgaard et al electrode attachment system would have been an obvious alternative arrangement to accomplish the same task desired in the Hurtado patent.

In regards to claims 52-64, Hurtado teaches a belt with VELCRO securing means 30 and 130, and as modified by Axelgaard, would include similar fastening means for fastening the electrode to the attachment means in that both Axelgaard and applicant use adhesives to secure the electrodes to the attachment means. In addition, with respect to applicant’s second embodiment in which applicant uses snap (stud fastener) connectors, Axelgaard shows that the

Art Unit: 3762

attachment mean's fastening means may include the adhesive which binds to a stud connector as show in figure 1. With respect to claims 57-64, the examiner considers it to have been obvious to substitute male and female snap connectors for attaching the central electrode to the attachment means of Hurtado since such connectors are notoriously old and well known for attaching electrodes to various mounting devices.

Allowable Subject Matter

4. Claims 46-51 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The prior art does not suggest or render obvious each of the means recited in the independent claim 1 and including the receiving means in dependent claims 46-51. The plastic snap fit receiving element 54 disclosed as applicant's receiving means including a jack for connecting a pulse generator electrically to the electrodes or an equivalent thereof is not disclosed or rendered obvious by the prior art.

5.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Bockelman whose telephone number is (703) 308-2112. The examiner can normally be reached on Monday through Friday from 9:30 am to 6:00 pm.

Art Unit: 3762

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Angela Sykes, can be reached on (703) 308-5181. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3591.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0858.
